### **REASONS FOR ALLOWANCE**

1. These comments are made in addition to the remarks in Applicant's specification and arguments, concerning the manner in which the invention distinguishes from the art discussed therein.

The Examiner notes that the prior art does not disclose or suggest the claimed combination including particularly a coin dispensing system having a drawer for supporting vertical tubes of currency, means for withdrawing tubes of currency from the drawer, a sensor for sensing quantity of tubes in the drawer, and a control system operatively associated with the sensor for determining quantity of currency in the drawer. The prior art lacks this structure or anything equivalent to it. Webster's Collegiate Dictionary, 10<sup>th</sup> ed., p.955, defines the term "quantity" as meaning "total amount or number". Currency is construed as is used by Applicant in the specification to mean the coins in the vertical tubes. Thus, the drawer supports vertical tubes of coins. The device also includes a sensor that senses the quantity, i.e., the number of tubes in the drawer, and also has a control system that converts the sensed number of coin tubes into a monetary amount, i.e., the quantity of currency in the drawer.

The prior art, Valiulis (US 6,539,280 B1) discloses the ability to find the amount of cylindrical products in a dispensing row having a pusher that pushes the entire row towards the front, the front-most item being dispensed upon command. Valiulis' disclosure does not have a control system that converts the number of coin tubes into a total monetary value.

The prior art Savage (US 5,205,436) discloses a vending machine with drawers having coil dispensers in each row. Again, this device also does not have a control system that converts the number of coin tubes into a total monetary value.

The prior art O'Brien (US 6,415,953 B1) discloses a vending machine having withdrawal means (44). O'Brien also does not disclose a control system that converts the number of coin tubes into a total monetary value.

The prior art of Delbrouck (US 4,269,326) discloses a shelf having a pusher that pushes items from the back to the front to be dispensed. Delbrouck also does not disclose a control system that converts the number of coin tubes into a total monetary value.

Pullen (US 6,220,463 B1) discloses shelving system. Pullen also does not disclose a control system that converts the number of coin tubes into a total monetary value.

The foregoing is an Examiner's Statement of Reasons for Allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to JEFFREY A. SHAPIRO whose telephone number is (571)272-6943. The examiner can normally be reached on Monday-Friday, 9:00 AM-5:00 PM.
